Notes

Terms to know:

- A **repository** is a storage location where all files of a project are kept, including code and changes made over time.
- Git helps track every modification, allowing developers to revert to previous versions if needed.
- In **GitHub**, the repository is hosted ***online***, enabling developers to collaborate on the same project from different locations.

Your Work

Types of Repositories in Git and GitHub

1. Local Repository:

- Stored on your personal device.
- Changes are made directly and don't require an internet connection.
- You can use Git commands like add and commit to manage changes locally.

2. Remote Repository:

- Hosted on a server like GitHub, GitLab, or Bitbucket.
- Enables collaboration between developers remotely, as they can push their changes to the remote repository.
- Uses commands like push and pull to update changes between the local and remote repositories.

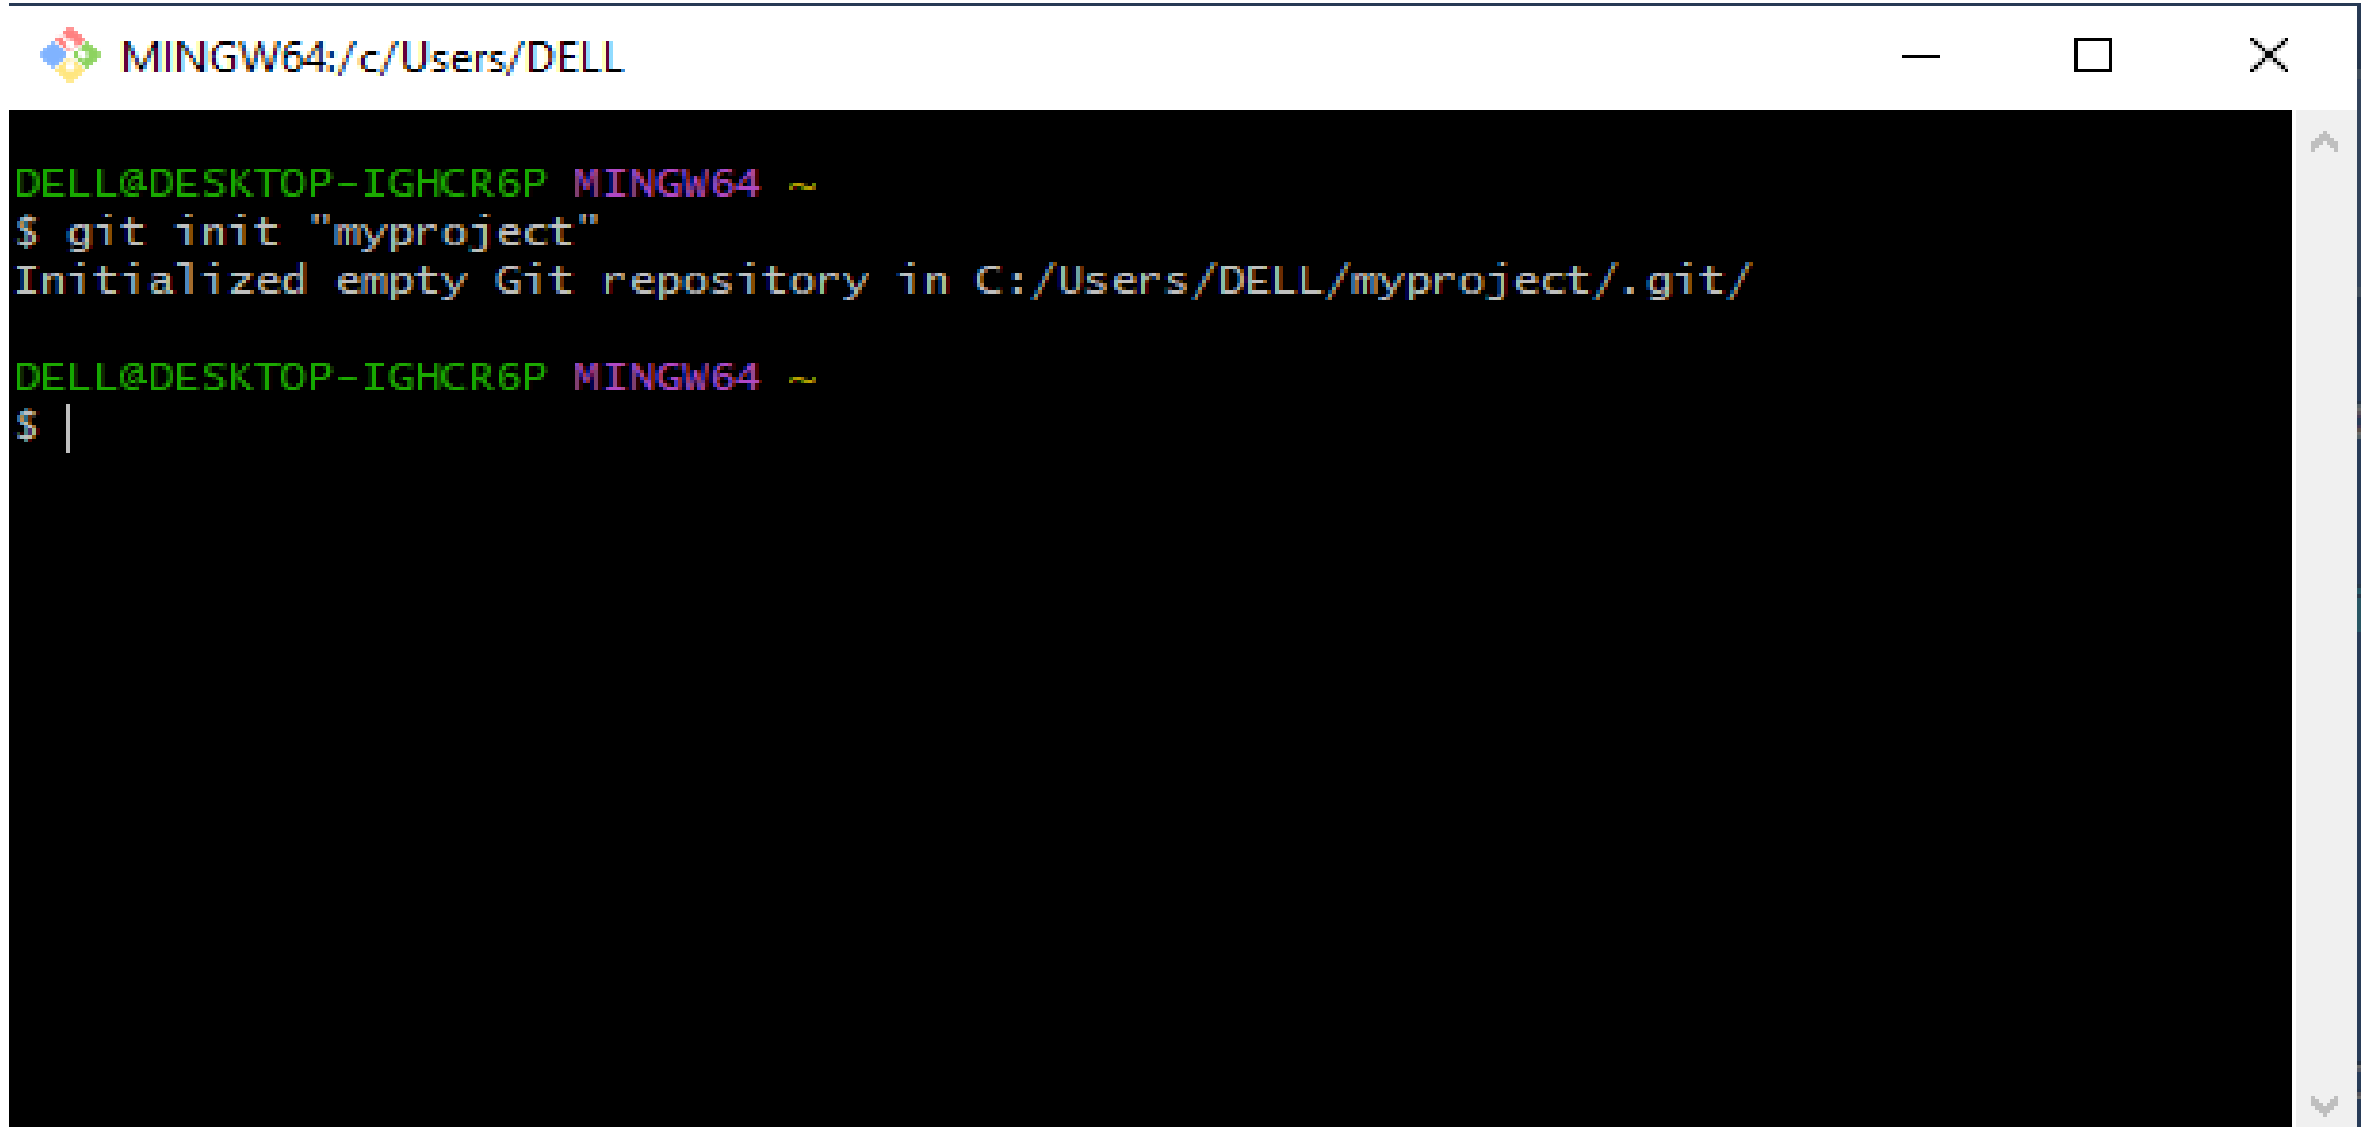

❑ **Public Repository:**

- Open to the public, allowing anyone to view the code (but not edit it unless they have access).
- Ideal for open-source projects where developers from around the world can view and contribute

❑ **Private Repository:**

- Only accessible to users with permission.
- Useful for projects that require privacy, such as commercial or closed-source projects.

Create new repo. with name “myproject”

```
MINGW64:/c/Users/DELL

DELL@DESKTOP-IGHCR6P MINGW64 ~
$ git init "myproject"
Initialized empty Git repository in C:/Users/DELL/myproject/.git/

DELL@DESKTOP-IGHCR6P MINGW64 ~
$ |
```

MINGW64:/c/Users/DELL/myproject

DELL@DESKTOP-IGHCR6P MINGW64 ~

\$ cd myproject

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)

\$ ls

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)

\$ ls -a

./ ../ .git/

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)

\$ git status

On branch master

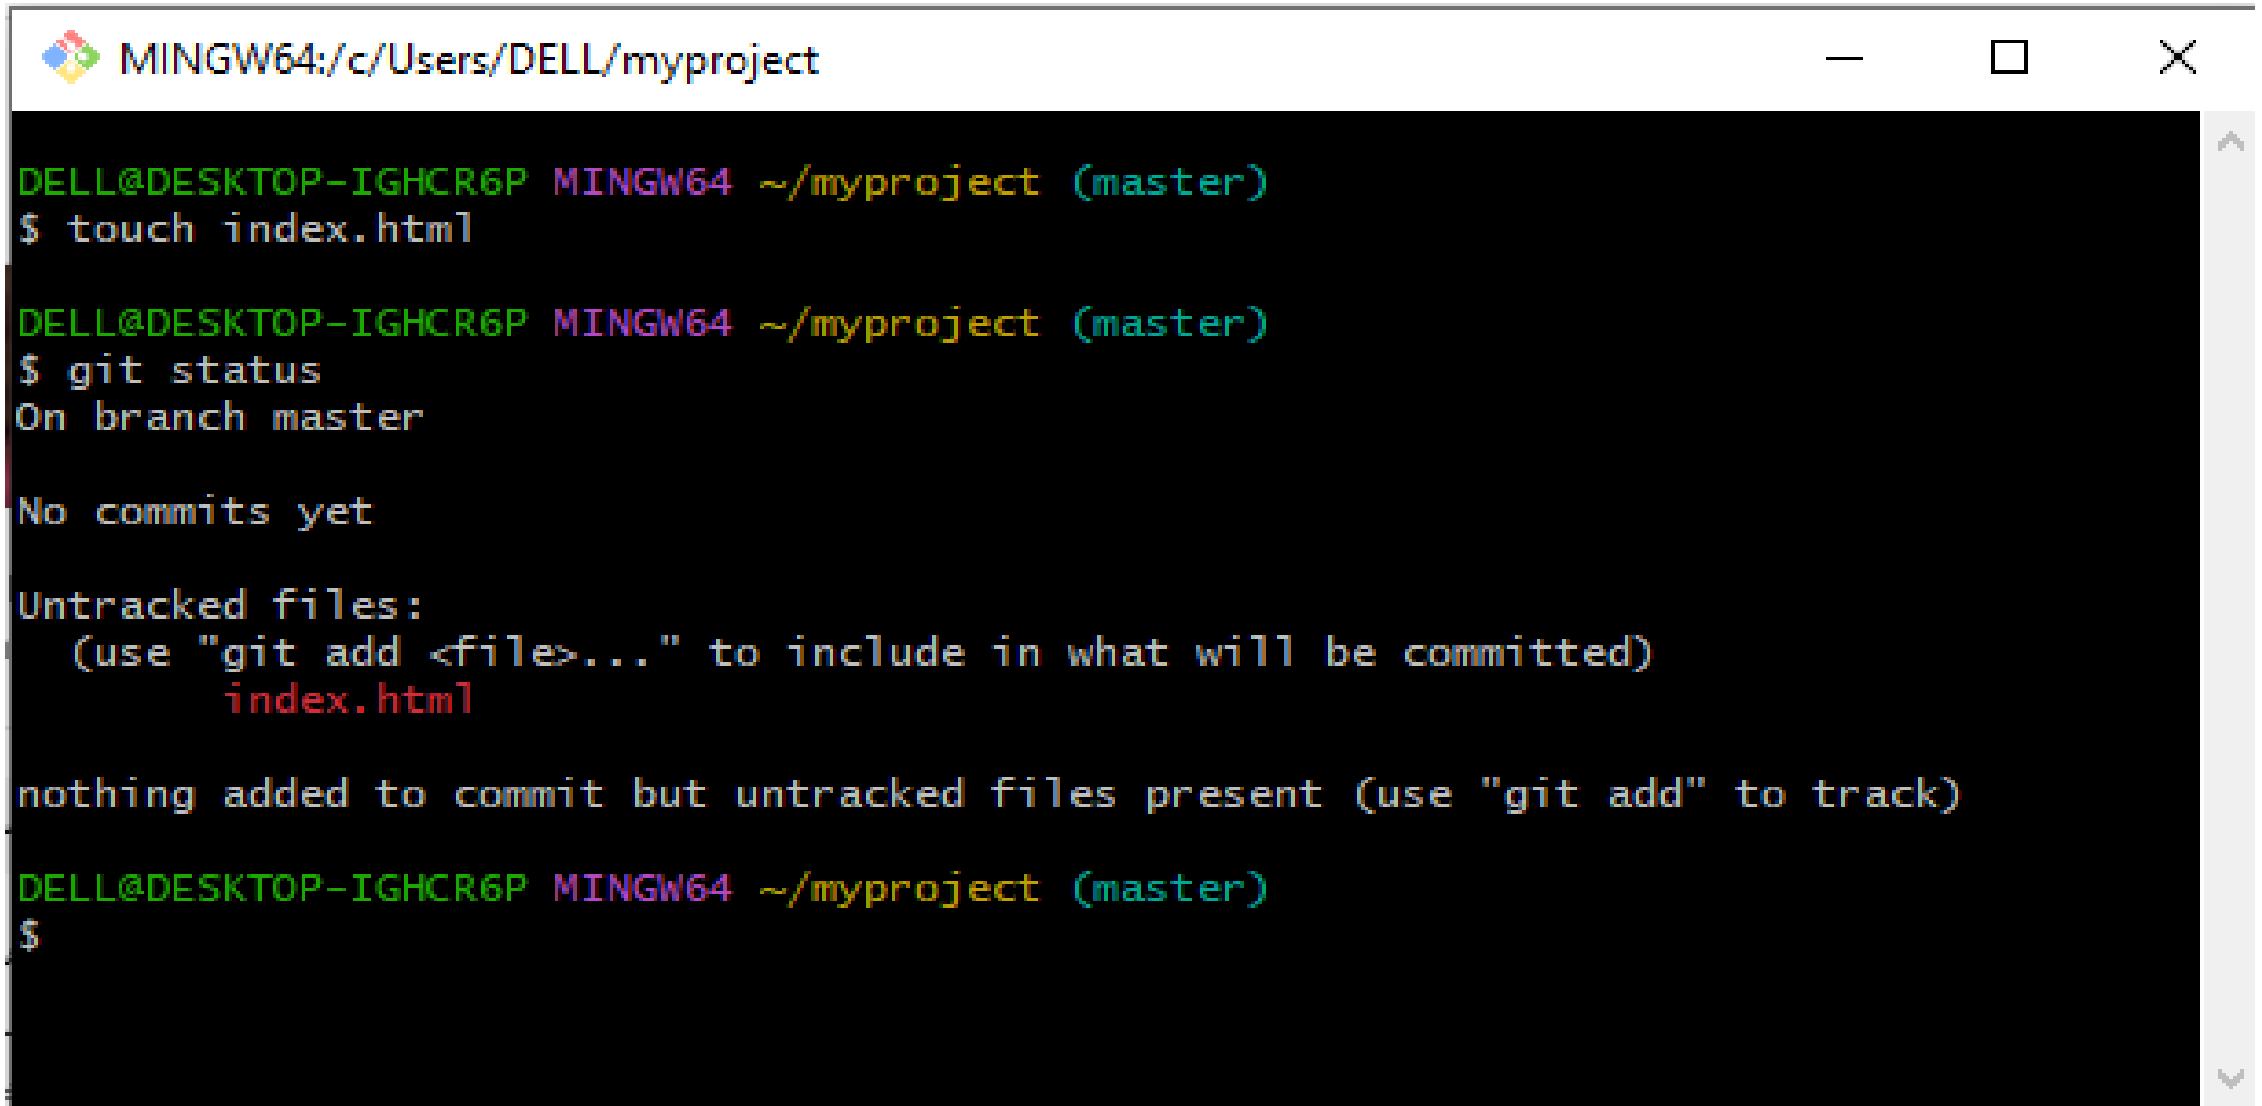

No commits yet

nothing to commit (create/copy files and use "git add" to track)

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)

\$

Create file inside the repo.

```
MINGW64:/c/Users/DELL/myproject

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ touch index.html

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
        index.html

nothing added to commit but untracked files present (use "git add" to track)

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$
```

Staging area :

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git add index.html

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git status
On branch master

```
    create index.html
```

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git checkout b2cca50d2aeb8cdbaa0d404a2478550cf7654077
```

- You are now viewing the project as it was at this specific commit.
- Any changes you make won't be saved to a branch unless you create a new branch or switch back to one.

MINGW64:/c/Users/DELL/myproject

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)

\$ git checkout b2cca50d2aeb8cdbaa0d404a2478550cf7654077

Note: switching to 'b2cca50d2aeb8cdbaa0d404a2478550cf7654077'.

You are in 'detached HEAD' state. You can look around, make experimental changes and commit them, and you can discard any commits you make in this state without impacting any branches by switching back to a branch.

If you want to create a new branch to retain commits you create, you may do so (now or later) by using -c with the switch command. Example:

```
git switch -c <new-branch-name>
```

Or undo this operation with:

```
git switch -
```

Turn off this advice by setting config variable advice.detachedHead to false

HEAD is now at b2cca50 adding header

DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject ((b2cca50...))

\$

Git Detached HEAD State:

Detached HEAD: You are currently on a specific commit (b2cca50) rather than on an active branch like master.

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject ((b2cca50...))  
$ git branch  
* (HEAD detached at b2cca50)  
  master
```

- ☐ Git is referencing a single commit instead of a branch.
- ☐ Any changes you make now will not be saved to a branch unless you switch or create one.
- ☐ Useful for **testing** or **exploring** without affecting active branches.

Return to an existing branch (or master):

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject ((b2cca50...))  
$ git checkout master  
Switched to branch 'master'  
  
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)  
$ |
```

Create Branch :

 MINGW64:/c/Users/DELL/myproject

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git branch mybranch
```

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git status
On branch master
nothing to commit, working tree clean
```

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)

Git Hub

Git Hub

- Version control system (on cloud).

The screenshot shows the GitHub profile page for user 'shereenYehia22'. The browser address bar shows the URL: `github.com/shereenYehia22?tab=overview&from=2024-11-01&to=2024-11-02`. The page header includes the GitHub logo, the username 'shereenYehia22', a search bar, and navigation icons. Below the header, there are tabs for 'Overview', 'Repositories', 'Projects', 'Packages', and 'Stars'. The 'Overview' tab is selected. The profile section on the left shows a green and white pixelated avatar, the name 'shereen yehia', and a bio field with the placeholder 'Add a bio'. To the right of the profile, the text 'Popular repositories' is followed by a large message: 'You don't have any public repositories yet.' Below this, a '0 contributions in 2024' section displays a calendar grid for the year 2024, with months from Jan to Dec and days of the week (Mon, Wed, Fri). A 'Contribution settings' dropdown is visible next to the year 2024. At the bottom, the 'Contribution activity' section shows a timeline for 'November 2024'.

To connect Git with Git Hub:

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
```

```
$ git remote -v
```

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
```

```
$ git remote add origin https://github.com/shereenYehia22/myproject.git
```

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
```

```
$ git remote -v
```

```
origin https://github.com/shereenYehia22/myproject.git (fetch)
```

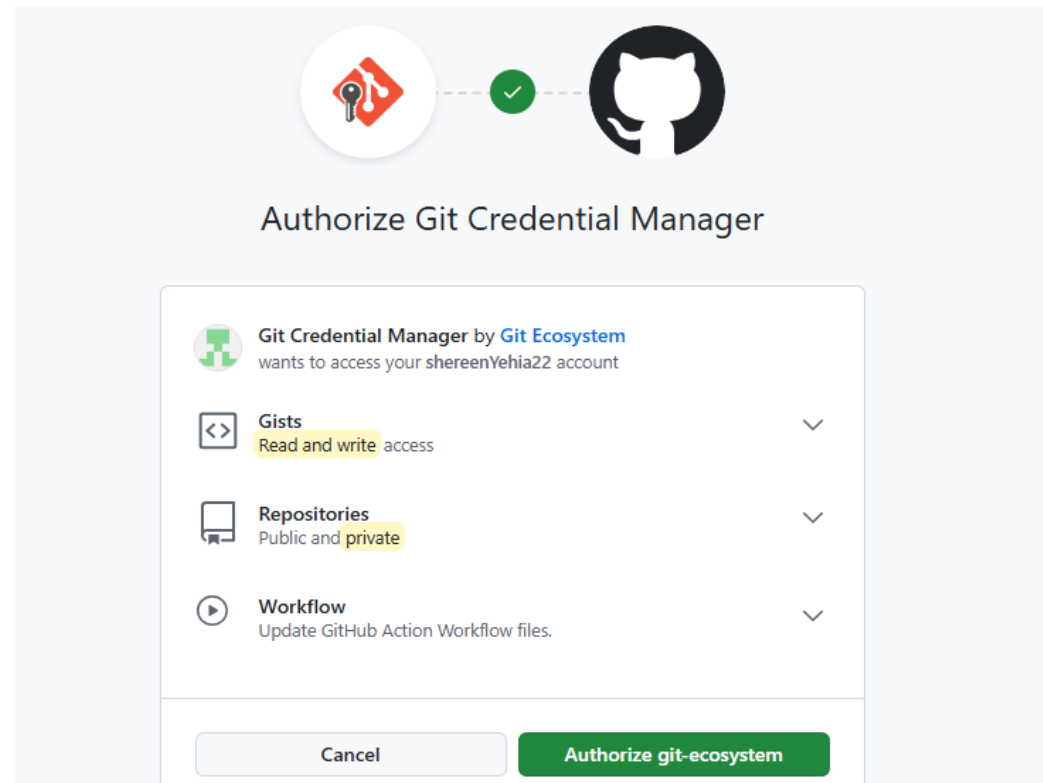

```
origin https://github.com/shereenYehia22/myproject.git (push)
```

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git push -u origin master
```

It pushes the local master branch to the remote repository (often on GitHub or another Git hosting service), setting it as the upstream branch.

push :

Uploads your local commits
to the remote repository.

Here's a breakdown of `git push -u origin master` with examples:

Explanation:

- **Push:** Sends your local branch (`master`) to the remote repository (`origin`).
- **-u (upstream):** Links your local branch to the remote branch for future synchronization.

Without `-u` :

```
git push origin master  
git pull origin master
```

After using `-u` :

```
git push  
git pull
```

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git push -u origin master

Add people

- If want to fetch and merge updates from the master branch of the remote repository (origin) into your local master branch.

```
DELL@DESKTOP-IGHCR6P MINGW64 ~/myproject (master)
$ git pull origin master
From https://github.com/shereenYehia22/myproject
* branch          master      -> FETCH_HEAD
Already up to date.
```

Take Care:

every student in the project
team must use Git and Git Hub.

and it has a high mark on the
project score.

Resources you must study:

- <https://www.youtube.com/watch?v=ACOiGZoqC8w&list=PLDoPjvoNmBAw4eOj58MZPakHjaO3frVMF&index=1&t=0s>
- <https://youtu.be/fDkR0TDR9dI?si=WEuoOTBspnqDUNGP>

Any Question?!

Thank You!
